

Oracle Certification & Tracks

Oracle 10g

Oracle DataBase 10g is the first database designed for enterprise grid computing. It is the job of Oracle DBA's to manage this advanced information system which aims to improve the existing IT infrastructure while lowering costs. Oracle is currently the recognised leader in the worldwide relational and object relational database management systems (RDBMS) software market. It has never been more important to develop skilled and knowledgeable DBA's!

Our training helps professionals perform their job role effectively while also preparing them for exams. Certification brings staff the recognition they deserve, and employers the assurance that their staff are performing to the highest standards. In preparing delegates for certification our trainers never lose sight of real world scenarios with plenty of 'hands-on' training.

Enjoy the best of both worlds: the finest independent Oracle training, with the official exams administered by Prometric. After successful completion of the appropriate exams, Interquad issues Oracle 10g database administrator certification. The certification track shows how you achieve this accreditation without compromise on quality.

Oracle 10g Track
